SECTION 01

IN THIS SECTION

- 01.1 About this guide
- 01.2 Brand foundation

Foundation

What this guide covers, how to use it, and the ideas the identity is built to express. Read this section before applying anything in the four that follow.

About this guide

Standards for using Augur consistently across product, communications, and partner materials. It governs the identity decisions shared across product, communications, community, and partner work.

HOW TO USE IT

What it covers, how to apply it, what wins

SCOPE

This guide governs the identity decisions shared across product, communications, community, and partner work. Product tokens and component libraries remain the implementation source of truth.

Preserve supplied artwork and production tokens. Do not recreate a logo, sample colors from screenshots, or introduce a parallel type scale.

CHOOSING A TREATMENT

Use each section to choose the right asset, color, type treatment, or composition for the surface you are designing. The standards apply across Augur-owned and partner work.

When a use case is not covered, extend the underlying logic rather than inventing a one-off treatment.

DECISION HIERARCHY

1. Preserve identity assets

Logo geometry, color variants, clearspace, and the token icon are fixed.

2. Use system tokens

Color, typography, spacing, and surface treatments work as one system.

3. Protect meaning

Do not use brand color or visual emphasis in ways that conflict with product meaning or system state.

WHERE THE ARTWORK LIVES

Logo, glyph, and token icon masters are at augur-ecosystem/brand-assets. Always start from a supplied file. Nothing in this guide licenses redrawing a mark, and a mark rebuilt by eye will not match the one already in production.

VERSION

1.0, revised 31 August 2026.

Brand foundation

Augur provides a shared way to ask questions and record collective decisions. Across the Lituus application and the public front page, the identity should make important information easy to recognize, understand, and act on.

WHAT THE IDENTITY HAS TO CARRY

One idea, four traits, four habits

CORE IDEA

Make what matters clear.

Every Augur experience should reveal the point of the page quickly. Put the primary message or task first, remove noise from the main path, and make the next action easy to understand.

BRAND PROMISE

A focused, dependable experience that helps people understand what matters and what they can do next.

CHARACTER

Clear-eyed

Show the most important information first. Keep secondary detail available without letting it compete.

Credible

Earn trust through exact language, consistent behavior, and clear system feedback.

Neutral

Give no choice or participant a preferred voice. Use the same structure and emphasis for every choice.

Human

Use plain language and calm direction. Complexity is not an excuse to sound distant.

VOICE

Lead with what matters

Start with the page purpose, primary message, or next action. Put supporting detail second.

Remove the noise

Use only what helps someone understand or act. Move optional detail out of the main path.

Name the state

Use the same plain terms for open, closed, pending, and final states.

Make actions obvious

Use direct verbs and specific labels. A control should say what will happen before it is used.

THE TEST

If someone lands on the page cold, can they say what it is for and what to do next without reading twice? That question settles most layout arguments faster than any rule below it.

WHAT NEUTRALITY COSTS

Neutral is the hardest of the four, because it means giving up emphasis you are allowed to use. Equal structure for every choice is a design constraint, not a default.

WHERE THIS SHOWS UP

Every rule in sections 02 to 05 traces back to one of these. If a rule ever seems arbitrary, check it against the core idea before applying it.

SECTION 02

Logo system

IN THIS SECTION

- 02.1 Logo family
- 02.2 Horizontal lockup
- 02.3 Vertical lockup
- 02.4 Glyph
- 02.5 Clearspace
- 02.6 Minimum size
- 02.7 Color variants
- 02.8 Approved backgrounds
- 02.9 Incorrect usage
- 02.10 Token icon

The Augur logo system includes the horizontal and vertical lockups, the standalone glyph, and the REP token icon. This section explains which composition and color variant to use, how much clearspace to maintain, minimum sizing, approved backgrounds, and common misuse.

Logo family

The Augur mark exists in three compositions. The horizontal lockup is preferred for most use cases. The vertical composition is for situations where the horizontal one does not fit. The glyph stands alone as the compact expression of the identity.

All three are available in full color, single-tint dark, white, and reversed, in PNG and SVG.

HORIZONTAL · PRIMARY

VERTICAL

GLYPH

WHICH ONE

Horizontal unless the width is genuinely constrained. Vertical when it is. Glyph only where the name Augur is already on the surface. Reaching for the vertical lockup because it looks better in the space is the common error.

ONE CHOICE PER SURFACE

Pick a composition per surface and keep it. A header, a favicon, and a slide master can each use a different composition; the same header should not alternate between two.

NAMING

Files are named by variant, not by composition: Color, Black, White, Reversed sit inside a Horizontal, Vertical, or Glyph folder. Black means Augur Navy #0E0E21, not #000000.

Horizontal lockup

The primary composition. Use it wherever horizontal space allows: website headers, documents, presentations, press material, and exchange listings.

Choose the variant by background rather than by preference. Full color on light or dark surfaces where the green holds contrast, reversed on dark surfaces, single tint where the logo is a supporting element.

COLOR · TWO TINT · LIGHT SURFACE

AUGUR NAVY · SINGLE TINT

WHITE · SINGLE TINT

REVERSED · TWO TINT

BACKGROUND FIRST, PREFERENCE SECOND

Read the surface, then pick the variant. Color on Paper and White. Reversed on Augur Navy. The green is the thing being protected: it carries 11 . 87 : 1 on Navy and 1 . 47 : 1 on Paper, so it can hold a mark on dark and cannot hold one on light.

WHITE AND REVERSED ARE NOT THE SAME

White is one tint, the whole mark in white. Reversed is two tints, green arrow over white wordmark. Use Reversed on Navy by default; use White where the mark is supporting and should not pull attention.

MINIMUM WIDTH

Below 150 px wide the glyph inside this lockup falls under its own minimum. See 02.6.

Vertical lockup

Use the vertical composition when the primary composition is not a good fit. It is a fallback for constrained widths, not an alternative primary.

Typical cases are narrow columns, square placements, badge formats, and centered layouts such as event backdrops or slide covers.

The same tint rules apply as for the horizontal composition.

IT IS A FALLBACK

If the horizontal lockup fits, use it. The test is whether the horizontal mark would have to drop below its minimum to fit the space – not whether the vertical one looks better centered in it.

WHERE IT EARNS ITS PLACE

Narrow columns, square and circular placements, badge and avatar formats, event backdrops, slide covers, and any layout whose axis is already vertical.

MINIMUM HEIGHT

The glyph sits above the wordmark at roughly half the lockup height, so this composition needs 93 px of height to keep the glyph above its own minimum. See 02.6.

Glyph

The glyph is the compact expression of the Augur identity: the arrow and pyramid silhouette without the wordmark. Use it where the full lockup would be illegible or where the Augur name is already established by context.

When the glyph is used alone, the proportion between the glyph and adjacent elements must match the clearspace proportion defined for the full lockup.

COLOR

AUGUR NAVY

WHITE

REVERSED

VARIANT MAPPING

Color is green with navy. Reversed is green with white. White is a single white tint. The files named Black use Augur Navy #0E0E21 – there is no true black anywhere in this system.

TWO FORMS, ONE GAP

The glyph is an arrow above a pyramid, separated by a gap of about four percent of its height. That gap is the feature most likely to close at small sizes, which is why the minimum in 02.6 is set where it is.

WHEN THE GLYPH MAY STAND ALONE

Only where the name Augur is already established by the surrounding context: an app icon, a favicon, an avatar, a repeated element inside a product someone is already using. Never as a first introduction.

Clearspace

Use the lowercase a in the wordmark as the clearspace unit, written as 1a. Leave at least one a-width on the left and right, and one a-height above and below. No element, edge, or fold may enter that zone.

When the glyph is used alone, maintain the same proportion between the glyph and any adjacent element.

The unit scales with the artwork, so there is no separate fixed pixel or millimeter value. More clearspace is always allowed.

CLEARSPACE CONSTRUCTION

Shaded band: minimum clear space. Dashed boundary: logo bounding box. The 1a labels show the horizontal and vertical clearspace units.

WHAT THE UNIT IS

The lowercase a from the supplied wordmark. Left and right use its width; top and bottom use its height. Because the unit is drawn from the artwork it scales with it, so one rule covers a favicon and a trade-show wall.

WHAT COUNTS AS AN INTRUSION

Any ink, any edge, and any fold. Page trim, a card boundary, a column rule, a photograph, and a neighboring logo are all intrusions. Nothing enters the zone, including elements that are themselves quiet.

THE GLYPH ALONE

Keep the same proportion between the glyph and whatever sits next to it. Clearspace is defined as a ratio, not a measurement, so it does not need restating per composition.

Minimum size

The glyph may be reduced to a height of 50 px on screen, measured from the tip of the arrow to the base of the pyramid. Use a larger size whenever the layout allows.

The controlling dimension is the pyramid, which must not fall below 24 px. Everything else on this page derives from that.

If the wordmark becomes difficult to read at a small size, use the glyph only where the surrounding context already identifies Augur.

HOW THE MINIMUM IS DERIVED

The pyramid is 48.3% of the glyph, so a pyramid of 24 px puts the whole glyph at 50 px. The shaded band is the gap between the two forms: below this size it drops under two pixels and they begin to merge.

AT THE MINIMUM

Actual size

Glyph

50 × 45 px

Horizontal lockup

150 × 50 px

Vertical lockup

94 × 93 px

HOW TO MEASURE

Take the glyph's full bounding box, arrow tip to pyramid base. Do not measure the pyramid alone unless you are checking the derivation. The same floor applies to the glyph inside a lockup, which is where the lockup minimums above come from.

WHY THE LOCKUPS DIFFER

The glyph is the same height as the horizontal lockup and a little over half the height of the vertical one, so the vertical composition needs roughly twice the height to keep its glyph legal. Composition changes the number; the rule does not change.

BELOW THE MINIMUM

There is no approved treatment. Use the glyph where context already names Augur, or give the mark more room. Do not simplify, sharpen, thicken, or redraw it to survive a smaller size – a mark redrawn to fit stops matching the one in production.

Logo color variants

The color rule has a default and two named exceptions.

The full logo may be used in one or two tints. Two tints is the default. Use a single-tint variant only where the green has no contrast against the background or there are production limitations, or where the logo is a supporting element that does not need to draw attention, such as in documentation or repeated on each page of a slide deck.

In those cases use the supplied single-tint Augur Navy or white variant.

TWO TINT · DEFAULT

ONE TINT · DARK

ONE TINT · WHITE

TWO TINT · REVERSED

Augur Navy is #0E0E21. It is the primary brand color and the default dark surface throughout the system. The files named Black use this Augur Navy value – there is no true black in the palette, and substituting one will not match anything else on the surface.

TWO TINTS IS THE DEFAULT

One tint is an exception with two named causes: the green has no contrast on the background, or production cannot carry two colors. Preferring the quieter look is not one of them.

THE THIRD CASE

A supporting role. A mark repeated on every slide of a deck, or sitting in the corner of a documentation page, is not asking for attention and should not take it. Single tint is correct there.

DO NOT BUILD YOUR OWN

Every variant on this page is a supplied file. Recoloring the two-tint artwork to make a one-tint version produces a mark that is close but not identical, and the difference shows the moment the two appear together.

Approved backgrounds

This section defines which logo variant is used against each approved brand surface while maintaining legibility and adequate contrast.

Use Color on the near-white light surface and Reversed on Augur Navy. Keep the logo on a controlled solid surface whenever imagery or a pattern would reduce its clarity.

SAFE SURFACES

LIGHT SURFACE #F5F5F8 · USE COLOR

NAVY SURFACE #0E0E21 · USE REVERSED

WHITE #FFFFFF · USE COLOR

RAISED #242438 · USE REVERSED

FOUR SURFACES, TWO VARIANTS

Color on the two light surfaces, Reversed on the two dark ones. Every other brand surface in section 03 is a lifted step of one of these four and takes the same variant as its parent.

WHY SOLID

These pairings hold the relationship between Augur Green, Augur Navy, and white. A photograph or pattern breaks it in a way no variant choice can repair, because the background is not one color to choose against.

WHEN THE SURFACE IS NOT YOURS

Partner sites, listings, and press templates are uncontrolled. Place the mark on a solid brand field of your own and put that field on their surface, rather than putting the mark straight onto whatever is there.

Incorrect usage

Preserve the supplied geometry, color, clearspace, and composition. These examples cover the most common production failures; when in doubt, return to the approved asset rather than correcting it by eye.

DO NOT ENCLOSE OR KEYLINE

No border, badge, or containing shape.

DO NOT ROTATE

Keep the wordmark on its supplied baseline.

DO NOT DISTORT

Scale uniformly; never stretch or compress.

DO NOT USE A BUSY FIELD

Move the mark to a controlled solid field.

DO NOT USE LOW CONTRAST

Choose the variant for the background.

DO NOT CROWD CLEARSPACE

Keep type, edges, and rules outside 1a.

DO NOT ADDEFFECTS

No shadow, glow, bevel, texture, or gradient.

DO NOT ADD TAGLINES

Keep campaigns and partner marks separate.

Token icon

The REP token icon shown here is the canonical token asset.

Use the supplied PNG or SVG directly. Keep its geometry, colors, proportions, and circular navy field unchanged. Do not redraw, recolor, crop, or add effects to the icon.

A complete composition

The navy circle belongs to the icon. Preserve the centered glyph, field, geometry, and color relationship exactly as supplied.

Production use

Use SVG for scalable artwork and PNG for raster environments. Keep the icon circular and allow clearspace around its outer edge.

Do not recolor

The green, white, and navy relationship is fixed. The icon is a token identity, and a recolored token reads as a different token.

Do not alter geometry

Do not redraw or change the relationship between the upper and lower forms, and do not substitute the section 02.4 glyph for the one inside the icon.

Do not remove the field

The navy circle is part of the token icon, not a presentation background. Cropping to a square, or dropping the circle to sit the glyph on your own surface, both produce a mark that is not this one.

SECTION 03

Color system

IN THIS SECTION

- 03.1 Core palette
- 03.2 Product surfaces
- 03.3 Themes and accessibility

The color system defines Augur's palette across the Lituus application, the public front page, and supporting communications. Light and dark are equal expressions of the same system. The core palette below establishes the primary, secondary, surface, and text colors; extended ramps and production tokens build on it.

Core palette

Five fixed core values share one baseline. Four theme companions sit beneath them: they solve contrast and elevation without enlarging the core palette.

Each label states the role; each name states the color.

CORE FOUNDATION

5 FIXED VALUES

01 BRAND ANCHOR	02 BRAND ACCENT	03 LIGHT SURFACE	04 SECONDARY · LIGHT	05 SECONDARY · DARK
Augur Navy	Augur Green	Augur Paper	Augur Graphite	Augur Pewter
#0E0E21	#2AE7A8	#F5F5F8	#4A4B61	#A1A1B8

THEME COMPANIONS

4 SUPPORTING VALUES

NAVY COMPANION	NAVY COMPANION	GREEN COMPANION	GREEN COMPANION
Raised	Mist	Deep	Wash
#242438	#71728A	#095E42	#C9FFE5

DARK FOUNDATION

Navy grounds dark UI. Raised layers it; Mist marks edges and rules only, never copy.

ACCENT LOGIC

Green accents dark surfaces. Deep carries readable green on light; Wash stays a fill.

SUPPORTING FOUNDATION

Paper is the light canvas. Graphite and Pewter support, but never replace, primary copy.

Product surfaces

The five core colors become usable interface foundations through stepped surfaces and explicit text pairings. These supporting values extend the brand; they do not enlarge the core palette.

LIGHT SURFACES

CANVAS	RAISED	MUTED	BORDER
#F5F5F8	#FFFFFF	#ECECF2	#E0E0E7

Paper is the default canvas; White creates elevation. Muted is a quiet section field, while Border separates structure without becoming a surface.

DARK SURFACES

CANVAS	SURFACE 1	SURFACE 2	SURFACE 3
#0E0E21	#161629	#1D1D30	#242438

Navy anchors the theme; three lifted surfaces create hierarchy for panels, controls, and selected regions without drifting into an unrelated charcoal system.

LIGHT TEXT PAIRING

Primary text is Augur Navy on Paper, White, and Muted. Secondary is Augur Graphite. Border is a rule color and never carries type.

DARK TEXT PAIRING

Primary text is Augur Paper on Navy and on all three lifted surfaces. Secondary is Augur Pewter, which holds 7.53:1 on Navy and 6.00:1 on Surface 3.

SURFACE CONSISTENCY

Use the same spacing and elevation logic in both themes. Surfaces organize content; they do not imply product priority, and lifting a panel is not a way to say it matters more.

Themes and accessibility

Light and dark are equal, everyday themes. Choose either for the surface, environment, or user preference. Content, behavior, and hierarchy remain consistent across both.

LIGHT MODE

Open

Choices

Yes or No

Your vote

Not submitted

Navy is the canvas; a lifted layer holds the same record. Field order and alignment remain identical.

ACCESSIBILITY

TEXT CONTRAST		AA NEEDS 4.5:1
LIGHT		
Augur Navy on Paper		17.49:1
Graphite on Paper		7.81:1
Deep on Paper		7.17:1
DARK		
Paper on Augur Navy		17.49:1
Pewter on Augur Navy		7.53:1
Green on Augur Navy		11.87:1

Keep text and controls at WCAG AA or better. Recheck every new color-on-background pairing before it ships.

INFORMATION ORDER

Lead with the page purpose or task. Follow with status, choices, and the primary action.

STATE LANGUAGE

Label open, closed, pending, and final states. Color only reinforces the words.

THEME PARITY

Keep content, order, spacing, and geometry identical in light and dark.

SECTION 04

IN THIS SECTION

- 04.1 Typeface system
- 04.2 Hierarchy and use

Typography

Typography gives Augur a clear, consistent voice across Lituus, the public front page, documents, and presentations. Sora carries the identity; Schibsted Grotesk brings a warmer reading rhythm. Their related sans-serif structures keep every context in the same visual universe.

Typeface system

Sora is Augur's primary family for identity, display, and headings. Schibsted Grotesk is the secondary for body copy, metadata, tables, and dense UI text. Both are contemporary sans serifs. Sora is sharper; Schibsted is warmer and more human.

SORA WEIGHT SET

Aa 42

Light
Large supporting statements.

Aa 42

Regular
Body copy, labels, and context.

Aa 62%

SemiBold
Headings, controls, emphasis.

TWO FAMILIES, CLEAR ROLES

Sora, the primary

Use for identity, display, headings, primary navigation, controls, and key actions.

Schibsted Grotesk, the secondary

Use for paragraphs, helper text, metadata, tables, technical strings, and dense UI.

Boundary

Do not alternate families for decoration. Sora leads. Schibsted supports. Keep one role per text element.

SECONDARY SPECIMEN

Aa Bb Gg Rr

01 24 128 256

Review the evidence before you vote.

Schibsted adds a human rhythm without changing genres. Use it where reading should feel warmer than the interface voice.

Hierarchy and use

A restrained scale keeps product and communications related. Size creates order; weight confirms it. Color is never required to understand the page.

CHOICES

STATUS

Yes or No

Open

YOUR VOTE

Not submitted

VOTING CLOSES

14:32 UTC

SENTENCE CASE

Use sentence case for headings, controls, and labels. Capitals belong only to short metadata and standard abbreviations.

HIERARCHY

Do not stack size, weight, color, and capitals at once. One strong distinction and one secondary distinction are enough.

NUMBERS

Align numeric columns right. Use one precision per view. Put units in the header or beside the value.

LONG STRINGS

Truncate addresses in the middle. Preserve a recognizable prefix and suffix. Keep technical strings readable and visually secondary.

SECTION 05

IN THIS SECTION

05.1 Graphic language

Visual language

Visual language makes Augur recognizable across the public front page and the Lituus application. It combines a clear focal point, deliberate use of green, and restrained structure. Theme does not define purpose; hierarchy does.

Graphic language

Public-facing and product contexts have different pacing, but they share the same system. Either can use light or dark. Both should make the most important message or action unmistakable.

FOCUS

One clear priority

Give each section a visible purpose. Use scale and space to separate primary content from supporting detail.

SIGNAL

Green marks intent

Use green for the primary action, active state, focus, or a short orienting rule. It should guide attention, not decorate every element.

STRUCTURE

Remove visual noise

Use hairlines, spacing, and surface changes to group related information. Keep secondary detail available without crowding the main path.

PUBLIC-FACING FRONT PAGE

Sora carries expressive headlines and actions; Schibsted supports.

LITUUS APPLICATION

The restrained interface system carries repeated product tasks.

THEME IS NOT THE DIFFERENCE

Either context may use light or dark. Pacing and scale separate them, not palette.

WHAT GREEN IS FOR

One green element per view is usually right. On light it must come from Deep.

WHAT CARRIES THE DIFFERENCE

Expressive type and motion. Hierarchy and behavior stay identical.

Brand Foundation

Standards for using Augur consistently across product, communications, and partner materials.
